Analytics and Insights

Manage Risk Proactively with Data-Driven Behaviors

In today's shifting market, providers and payers are struggling to improve patient outcomes while skillfully managing clinical and operational costs. Value-based reimbursement models require rapid adoption of emerging technologies, processes, and care models.

Undoubtedly, better decisions lead to better outcomes — but how does your organization arrive at its best decisions? On average, healthcare organizations use less than 50% of their structured data. In fact, less than 1% of an organization's unstructured data is analyzed or used at all.

Our consultants can help your stakeholders embrace actionable analytics and become data-savvy leaders to make data-driven decisions. Together, we can transform your business.

Inspiring a Better Healthcare System

Use Your Data Strategically to Move from Infrastructure to Insights

Increase your organization's analytics maturity to provide actionable intelligence that supports targeted interventions

Build a Data-Driven Enterprise

To successfully transition to value-based care, you must leverage your data in the right way. Compiling vast amounts of data does not make your organization data driven, instead you must be able to ask your data questions and trust the answers to lead your organization.

Our Change Healthcare consultants help you implement an organizational strategy to derive optimal value from your data and your technology investments.

Our services include:

- Evaluation of current data storage and analysis processes
- Data selection and augmentation
- Resource, process, and technology coordination
- Advanced data modeling and analytics design
- Incorporation of data science capabilities
- User adoption and training-program creation
- Data-governance-program development

Support Fact-Based Decisions

To use data effectively, you must be confident in its quality. Our consultants collaborate with your team to determine the reliability of your data.

We review your data needs, evaluate data availability, and recommend interventions at the source to help maximize impact and improve your confidence in the data's quality.

Our team helps you achieve an empowered, self-service, data-driven culture focused on making decisions on facts led by data. Through comprehensive consultation, we develop a deep understanding of your stakeholders' motivations and needs, helping you grow organizational competencies.

Analytics Value Chain

We provide a framework for your organization to:

- Collect and explore data
- Make data accessible
- Build a data science team
- Distinguish between reporting and analysis

Our consultants help you coordinate the people, processes, and technology required to build an analytics value chain. We can help you move from data to value.

Value

Action

Analysis

Reporting

Data

As roles and stakeholders continue to converge, analytics will provide a common ground for payers and providers to partner in the distribution and mitigation of risk. Change Healthcare will guide you through the process of analyzing disparate data to improve care for the populations you serve.
